Linear Partition Worksheet

Define M[n,k] to be the minimum possible cost over all partitions of (s_1,\ldots,s_n) into k ranges.

1. Consider the input (100, 200, 300, 400, 500, 600, 700) with k = 3. What is M[7, 3]? (**Hint:** It should be possible to answer this by visual inspection.)

2. What are M[1,2], M[2,2], M[3,2], M[4,2], M[5,2], M[6,2], and M[7,2]? (again, use visual inspection).

3. Can you write a formula for M[7,3] in terms of M[1,2], M[2,2], M[3,2], M[4,2], M[5,2], M[6,2], and <math>M[7,2]?
